Implementing Effective IT Governance and IT Management Gad J. Selig

In all enterprises around the world, the issues, opportunities and challenges of aligning IT more closely with the organization and effectively governing an organization's IT investments, resources, major initiatives and superior uninterrupted service is becoming a major concern of the Board and executive management. An integrated and comprehensive approach to the alignment, planning, execution and governance of IT and its resources has become critical to more effectively align, integrate, invest, measure, deploy, service and sustain the strategic and tactical direction and value proposition of IT in support of organizations. Much has been written and documented about the individual components of IT Governance such as strategic planning, demand management, program and project management, IT service management, strategic sourcing and outsourcing, performance management, metrics, compliance and others. Much less has been written about a comprehensive and integrated approach for IT/Business Alignment, Planning, Execution and Governance. This new title fills that need in the marketplace and offers readers structured and practical solutions using the best of the best practices available today.
