*Principles of Finance with Excel* is the first textbook that comprehensively integrates Excel into the teaching and practice of finance. This book provides exceptional resources to the instructor and student, combining classroom-tested pedagogy with the full potential of Excel's powerful functions.

In today's business world, computation is done almost wholly in Excel. Excel's ability to combine graphics with computation and perform complex sensitivity analysis with ease provides potent insights into financial problems. Despite this, most finance texts rely heavily on hand-held calculators and ignore Excel. As a result, many students find that after they enter the professional environment, they have to relearn both finance and Excel.

*Principles of Finance with Excel* is ideal for undergraduate courses in introductory finance or as a reference for finance professionals. A Free In-Text CD for students contains electronic versions of all spreadsheets in the book. A Companion Website -- <http://www.oup.com/us/benninga> -- contains lecture notes, PowerPoint Slides, and a Test Bank for instructors.
