Data Fusion: Concepts and Ideas H B Mitchell

This textbook provides a comprehensive introduction to the concepts and idea of multisensor data fusion. It is an extensively revised second edition of the author's successful book: "Multi-Sensor Data Fusion: An Introduction" which was originally published by Springer-Verlag in 2007.

The main changes in the new book are:

New Material: Apart from one new chapter there are approximately 30 new sections, 50 new examples and 100 new references. At the same time, material which is out-of-date has been eliminated and the remaining text has been rewritten for added clarity. Altogether, the new book is nearly 70 pages longer than the original book.

Matlab code: Where appropriate we have given details of Matlab code which may be downloaded from the worldwide web. In a few places, where such code is not readily available, we have included Matlab code in the body of the text.

Layout. The layout and typography has been revised. Examples and Matlab code now appear on a gray background for easy identification and advanced material is marked with an asterisk.

The book is intended to be self-contained. No previous knowledge of multi-sensor data fusion is assumed, although some familiarity with the basic tools of linear algebra, calculus and simple probability is recommended.

Although conceptually simple, the study of multi-sensor data fusion presents challenges that are unique within the education of the electrical engineer or computer scientist. To become competent in the field the student must become familiar with tools taken from a wide range of diverse subjects including: neural networks, signal processing, statistical estimation, tracking algorithms, computer vision and control theory. All too often, the student views multi-sensor data fusion as a miscellaneous assortment of different processes which bear no relationship to each other. In contrast, in this book the processes are unified by using a common statistical framework. As a consequence, the underlying pattern of relationships that exists between the different methodologies is made evident.

The book is illustrated with many real-life examples taken from a diverse range of applications and contains an extensive list of modern references.

From reader reviews:

Richard Slawson:

You may spend your free time to see this book this reserve. This Data Fusion: Concepts and Ideas is simple to bring you can read it in the playground, in the beach, train along with soon. If you did not have got much space to bring often the printed book, you can buy the actual e-book. It is make you much easier to read it. You can save typically the book in your smart phone. And so there are a lot of benefits that you will get when one buys this book.

Don Gonzales:

Many people spending their period by playing outside with friends, fun activity having family or just watching TV 24 hours a day. You can have new activity to pay your whole day by reading through a book. Ugh, ya think reading a book can really hard because you have to use the book everywhere? It all right you can have the e-book, taking everywhere you want in your Cell phone. Like Data Fusion: Concepts and Ideas which is finding the e-book version. So , try out this book? Let's observe.

Rhonda Hoffman:

This Data Fusion: Concepts and Ideas is completely new way for you who has interest to look for some information since it relief your hunger of knowledge. Getting deeper you upon it getting knowledge more you know or else you who still having bit of digest in reading this Data Fusion: Concepts and Ideas can be the light food for you because the information inside that book is easy to get by anyone. These books produce itself in the form that is reachable by anyone, yes I mean in the e-book form. People who think that in e-book form make them feel sleepy even dizzy this e-book is the answer. So there is no in reading a reserve especially this one. You can find actually looking for. It should be here for an individual. So , don't miss that! Just read this e-book style for your better life in addition to knowledge.

Lawrence Woods:

As a student exactly feel bored in order to reading. If their teacher inquired them to go to the library or even make summary for some reserve, they are complained. Just tiny students that has reading's internal or real their passion. They just do what the instructor want, like asked to the library. They go to there but nothing reading critically. Any students feel that looking at is not important, boring and also can't see colorful images on there. Yeah, it is to get complicated. Book is very important to suit your needs. As we know that on this time, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. Therefore this Data Fusion: Concepts and Ideas can make you truly feel more interested to read.
