Wound Ballistics Beat Kneubuehl (Ed.)

The definitive interdisciplinary reference work for wound ballistics. Fundamentals in Physics, arms and ammunition, ballistics. Simulating gunshot wounds: Virtopsy – a virtual autopsy method, combining CT, MRT and surface scanning and Materials that reproduce the interaction of soft tissue, bone and blood vessels with a bullet that penetrates the body. Wound ballistics for Short-range and long-range weapons, fragments, such as those from bombs and hand grenades, gas jets from blanks, gas weapons, etc., “Non-lethal” weapons as used by the police, in military operations or in urban settings. Specialist knowledge and reference detailed tables: ballistic tables for typical ammunition, ballistic values for numerous types of ammunition, including older types, materials properties, plus additional, hard-to-find data. Most tables are in both metric and U.S. units., an extensive trilingual glossary of specialized terminology in German, English and French. NEW: the latest diagnostic / simulation methods and the latest types of ammunition. The practice and application of wound ballistics in: forensic medicine, surgery – especially emergency and war surgery and international conventions. Globalized conflict zones, terrorism and crime – these issues affect a wider circle than just the armed forces and medical services abroad. Police officers, surgeons, forensics specialists and criminalists also need to be familiar with ballistics and gunshot wounds and must be able to assess the complex factors involved.
